1. Introduction

The Information Society Survey-ISS-Families statistical operation provides periodic information with regards to the implantation of new Information and Communication technologies – ICT – in the Basque Country. The data collected are data at a personal and family household level.

The files for the Information Society-Families (ESIF13) survey for families and individuals constitute a product for circulation directed at personal users with experience in the analysis and treatment of microdata. This format provides an added value, allowing them to carry out data exploitation and analysis that, for obvious limitations, cannot be covered by current circulation in the form of tables, publications and reports.

The microdata file corresponding to families-individuals is described in this report. The aim of disseminating a single file containing both personal and family data is to improve the use and quality of the data, and to serve the interest and benefit of being able to work with these data in aggregate form.

2. Criteria for selection of variables

This file contains a selection of variables collected in the survey for the selected person and his or her family characteristics. The selection of variables has been carried out based on criteria for both confidentiality and quality, which are detailed below:

2.1 Criteria of confidentiality

Maintaining the statistical secrecy of the individuals who provide the information is one of the main premises that govern this statistical activity. Therefore, the dissemination of any information of a personal nature collected under statistical secrecy must be carried out anonymously and in such a way that it cannot be associated with any specific individual, not even via the content or disaggregation of the disseminated variables.

Therefore, and in order to guarantee this safeguard, the following restrictions have been applied to the ESIF 2013 families file:

- Under no circumstances are variables of direct identification or data of a personal nature (national identity document, name, surname, addresses, telephone numbers, etc.) to be included.
- The maximum geographic disaggregation included is the province.
- Se utiliza A grouping of the family size variable that does not allow the identification of "singular" units is used.
- The only numeric variables included pertain to the personal elevator.

2.2 Criteria of quality

The quality of data is one of the aspects to consider in the analysis and treatment of statistical products. The quality of the statistical product can be defined according to determined qualitative factors promulgated by EUROSTAT: Appropriateness, precision and reliability, opportunity and punctuality, consistency and comparability, accessibility and clarity.

In this case and to select the variables to be included in the ESIF 2013 families-individuals microdata file, we have focused on the first two aspects such as relevance: appropriateness (relevance or interest of the data for the user); and the accuracy and reliability of the information.

2.2.1 Relevance

Given the large quantity of variables collected by the survey we have tried to include those assumed to be of greater interest and relevance.

2.2.2 Precision and reliability

The main limitation in any survey by sample is due to the availability of information solely for the sample units and not for the total objective population. The sampling design of the survey will shed light on the level of representation that we will be able to achieve with the collected information.

In the case of the ESIF the sample of households is chosen systematically by Province. For the main variables and crosses of the survey the level of representation required is Provincial. However, the large number of variables and the high level of detail that can be achieved with the variables included in this file do not guarantee statistical significance of all the exploitations or analysis that can be performed on this data.

The conclusions derived from studies or analyses performed on these data are the responsibility of the user. Nevertheless, to give an idea of the quality of the information for a specific cross or disaggregation it is recommended that you consult the tables of survey sampling errors and the corresponding sampling errors calculation report, which shows recommendations regarding acceptable levels of sampling error.

http://en.eustat.es/document/datos/Calculo_errores_ESI_c.pdf

3. Registry design

The families-individuals microdata file of the ESIF 2013 has a text format with fixed columns, and it is structured around the thematic areas collected by the survey for this statistical unit.

4. Description of the file

They include the literals corresponding to the codification of each one of the variables included in the file. See Appendix.

ANEXO 1

DESCRIPTION OF THE ESIF2013_FAMILIES-INDIVIDUALS.DAT FILE

1 Year surveyed

EP2_NUMC

2 Territory

EF2_TERR

01 Araba
20 Gipuzkoa
48 Bizkaia

3 Age (from the age of 6)

EP2_EDAD

4 Year surveyed

EP2_AENC

5 Year of birth

EP2_ANNA

6 Sex

EP2_SEXO

1 Male
6 Female

7 Level of education

EP2_NIVI2

1 Primary or less
2 Secondary and professional
3 Higher

8 Relation to activity

EP2_RELA

1 Students
2 In work
3 Inactive and Unemployed

9 Family size

TFAM

- 1 1 individual
- 2 2 individuals
- 3 Between three and five individuals
- 4 More than 5 individuals

10 Type of family

EF2_TIPF4

- 1 With sons and/or daughters
- 2 A couple
- 3 A single individual

11 Personal Email

EP2_PMAIL
